

VEDANSH PACHORI

Senior DevOps & Platform Engineering Consultant
vedansh.job@gmail.com | +91-8375962868

PROFESSIONAL SUMMARY

Senior DevOps & Platform Engineering Consultant with 8+ years architecting and operating large-scale, high-availability cloud-native infrastructure. Specialist in Kubernetes at scale, Istio Ambient Mesh, distributed storage, and DevSecOps. Deep, production-grade expertise in local LLM orchestration, RAG architectures, and autonomous AI agent frameworks (MCP, LangChain). Proven record of cutting deployment lifecycles, reducing MTTR, and delivering resilient, cost-optimized platforms for global enterprise clients.

SKILLS & TECHNOLOGIES

Orchestration & Service Mesh	Kubernetes (HPA/VPA, Admission Controllers, Node Problem Detector), Helm, Istio Ambient Mesh, Docker, Vagrant
Cluster Networking (CNI)	Calico, Cilium, Flannel — comparative architecture & implementation
Distributed Storage & DR	MicroCeph (Rocky Linux 9), Velero, backup & restore strategy
AI / LLM Platform	Ollama, NemoClaw, OpenClaw, RAG, LangChain, Hugging Face, Model Context Protocol (MCP), Claude API
Cloud & IaC	IBM Cloud, Pivotal Cloud Foundry, Terraform, Packer, CloudFormation, Ansible, SaltStack
CI/CD & VCS	Jenkins, GitLab CI/CD, GitHub Actions, Bitbucket, Git, Groovy
Security & DevSecOps	Trivy, RBAC, Custom Admission Controllers, Service Mesh Security, Air-gapped deployments
Observability	Prometheus, Grafana, ELK, LogDNA, New Relic, Dynatrace, Datadog
Scripting	Bash, Python, Groovy
Data & Streaming	Kafka, MongoDB, PostgreSQL

CONSULTING & WORK EXPERIENCE

Nagarro — Senior DevOps Consultant 05/2021 – Present

AI Platform & Autonomous Agent Engineering

- Architected comprehensive local LLM orchestration pipelines using **Ollama, NemoClaw, and OpenClaw**, advancing organization-wide autonomous AI capabilities while preserving strict data sovereignty.
- Engineered advanced AI agent workflows leveraging the **Model Context Protocol (MCP)** and **Claude API**, with secure model lifecycle management via Hugging Face.
- Built a secure, air-gapped enterprise AI platform on Ollama + RAG, reducing internal documentation search time by **50%+** while meeting enterprise data-compliance requirements.
- Developed "**kagent**", a proprietary autonomous AI agent for incident triage and log analysis, reducing MTTR for critical P1 incidents by **35%**.

Kubernetes Platform, Networking & Observability

- Spearheaded migration of **50+ microservices** to Kubernetes across Production and Staging, operating clusters of **100+ worker nodes** with **99.99% uptime** and zero-downtime cutovers.
- Led enterprise-wide rollout of **Istio Ambient Mesh** from the ground up; optimized iptables routing and eliminated redundant Nginx hops, cutting service-to-service latency by **25%**.
- Conducted comparative architecture analysis of **Calico, Cilium, and Flannel CNIs** to design optimized, secure cluster networking aligned with workload and security requirements.
- Implemented **Node Problem Detector** across large-scale clusters for proactive health monitoring and automated remediation of node-level kernel and hardware faults.
- Standardized performance-testing pipelines validating infrastructure resilience under peak loads of **10,000+ RPS**.

Distributed Storage, DR & DevSecOps

- Engineered a highly available **distributed storage architecture using MicroCeph on Rocky Linux 9**, fully integrated with **Velero** to guarantee robust Kubernetes backup and disaster recovery.
- Enforced production stability via custom **Kubernetes Admission Controllers** (preventing zero-replica deployments) and integrated **Trivy** into Jenkins for **100% automated** pre-deployment vulnerability scanning.
- Managed secure, scalable IoT containerized infrastructure for the Siemens engagement using Terraform and CloudFormation for repeatable IaC deployments.

OpsTree Solutions — DevOps Engineer (Onsite: Paytm Bank) 01/2020 – 04/2021

- Engineered dynamic Kubernetes auto-scaling (HPA/VPA), reducing monthly cloud infrastructure cost by **30%** while seamlessly handling **3x traffic spikes** during critical financial transaction windows.
- Automated Jenkins CI/CD pipelines for dynamic Kafka topic provisioning and zero-downtime rolling secret updates, accelerating release velocity by **40%**.
- Architected fault-tolerant performance-testing environments and configured HAProxy load balancing to validate system resilience prior to major production releases.

HCL Technologies — Site Reliability Engineer (SRE) 11/2017 – 01/2020

- Provisioned and operated high-availability on-premises Kubernetes and IBM Cloud Private (ICP) clusters supporting mission-critical enterprise workloads at **99.9% SLA**.
- Designed Golden AMI CI/CD pipelines using Terraform and Packer, enforcing immutable-infrastructure practices and eliminating deployment drift.
- Automated VM provisioning and complex DB2 silent installations, reducing manual infrastructure setup time by over **60%**.

EDUCATION

B.Tech, Computer Science Engineering — ABES Engineering College 2013 – 2017
